

IP PULSE — Research Report & Field Study Analysis

Study Objective: 50-Website Intelligence Field Study | Dataset Status: **INCOMPLETE (8/50 Observations)** | Generated: September 13, 2026 - 20:46 UTC

1. Executive Summary & Empirical Methodology

This document reports findings from an empirical field study of **8 standardized website destinations** evaluated using the IP PULSE network intelligence platform. Data was recorded using an intentional, manual-first methodology. Each target underwent DNS hostname resolution, IP geolocation lookup, BGP routing inspection, and transport security handshakes. All metrics are computed strictly from real observations without simulated data. Missing attributes remain explicitly represented as *UNKNOWN*.

Metric	Observed Value	Research Significance
Sample Quota Progress	8 / 50 (16.0%)	42 remaining to reach standard 50-site goal
HTTPS Adoption Rate	12.5% (1/8)	Percentage of targets serving active encrypted transport
TLS Certificate Validity	12.5% (1/8)	Percentage presenting verifiable cryptographic X.509 chains
Cloud / Datacenter Density	12.5% (1/8)	Destinations hosted on Hyperscalers or CDN Edge hubs
Mean Website Trust Score	86.9/100	Min: 85.0 Max: 100.0 StdDev: 5.0
Mean IP Risk Score	15.0/100	Min: 15.0 Max: 15.0 StdDev: 0.0

2. Trust & Risk Score Distributions

Score Bracket	Trust Count	Trust Share	Risk Count	Risk Share
0–20	0	0.0%	8	100.0%
21–40	0	0.0%	0	0.0%
41–60	0	0.0%	0	0.0%
61–80	0	0.0%	0	0.0%
81–100	8	100.0%	0	0.0%

3. Deterministic Research Findings

- **Sample Quota Progress:** Field study in progress: 8 of 50 target observations recorded (42 remaining to fulfill quota). (8 / 50 (16.0%))
- **Transport Layer HTTPS Adoption:** 1 of 8 valid observed websites (12.5%) operate with active HTTPS transport encryption. (12.5% Encrypted)
- **Cloud & Datacenter Concentration:** 1 of 8 observations (12.5%) were classified as large-scale Cloud or Datacenter infrastructure. (12.5% Cloud / DC)
- **Cohort Mean Scores:** Cohort mean Website Trust Score is 86.9/100, paired with an average IP Risk Score of 15.0/100. (Trust 86.9/100 | Risk 15.0/100)
- **Anonymization Telemetry:** Zero anonymization egress indicators (VPN, Proxy, or Tor exit relays) were detected across the observed endpoints. (0 Detections)
- **Leading Autonomous System:** Network routing was led by AS13335 Cloudflare, Inc. (APNIC and Cloudflare DNS Resolver project), routing 3 endpoints (37.5% of cohort). (AS13335 Cloudflare, Inc. (37.5%))

4. Observation Catalog Summary

#	Domain	Resolved IP	Country	Trust	Risk
1	1.1.1.1	1.1.1.1	Australia	85	15
2	cloudflare.com	104.16.132.229	Canada	85	15
3	chatgpt.com	172.64.155.209	Canada	85	15
4	google.com	142.250.182.238	India	85	15
5	8.8.8.8	8.8.8.8	United States	85	15
6	2001:4860:4860::8888	2001:4860:4860::88	United States	85	15
7	example.com	93.184.216.34	United States	85	15
8	github.com	20.207.73.82	India	100	15

5. Methodological Limitations & Ethical Boundaries

Website Trust Scores and IP Risk Scores are analytical indicators reflecting observed technical configurations. They do not constitute a definitive or legal verdict that a site is safe or malicious. All measurements are ephemeral and reflect the network state recorded at time of query.
